Xpert Champs — AI Engineering Internship Policy (Version 2.0)

Document ID: XC-INT-2026-V2 | **Effective Date:** October 16, 2026 | **Department:** AI & Machine Learning Division

1. Program Overview & Objectives

The Xpert Champs AI Engineering Internship is a structured training and project development program designed to provide university students and recent graduates with practical hands-on experience building Generative AI and Large Language Model (LLM) applications using Python. Note that this is a free, unpaid educational internship program.

2. Eligibility Criteria & Extended Deadlines

- **Eligible Candidates:** All undergraduate and postgraduate students in Engineering, Computer Science, AI, or allied fields (no minimum CGPA barrier; students accepted up to October 23, 2026 are also eligible).
- **Standard Project Duration:** 1 week (extended by 3 additional days for all active cohorts).
- **Extended Submission Deadline:** October 26, 2026 at 11:59 PM IST.
- **Updates & Communication:** Official instructions and submission alerts are broadcast directly in the WhatsApp Mastergroup instead of twice-weekly live sessions.

3. Technical & Deliverable Requirements

Each intern is required to complete the assigned AI Document Comparison Assistant application and submit their deliverables through the official internship portal. All projects must strictly use Python 3.10+, Streamlit for the web interface, `pypdf` for PDF text extraction, and `python-dotenv` for environment key loading.

Requirement Category	Version 2.0 Specification	Verification Method
Primary LLM API	Google Gemini API (`gemini-2.5-flash` or approved LLM equivalent)	Source code inspection in `comparison.py`
Maximum Input Size	Up to 120,000 characters per PDF with graceful truncation notice	Automated input validation test
Report Export Format	Microsoft Word (.docx via `python-docx`) or PDF (via ReportLab)	Download button test in Streamlit UI
Submission Package	Both Project ZIP file AND personal GitHub repository link (not live app URL)	Portal upload & GitHub repo verification
Certification Fee	INR 0 (Free completion certificate)	Issued upon passing final viva

4. Evaluation & Final Viva Guidelines

Intern submissions are evaluated on modular code organization (separating `app.py`, `document_reader.py`, `comparison.py`, and `report_generator.py`), graceful error handling for invalid or empty PDFs, and strict adherence to evidence-based prompting. During the final viva, candidates must explain their PDF text extraction pipeline, prompt structure, application workflow, error handling logic, and system limitations.
